SMARTFLOW Tools of the Trade

Turbulent Flow Basics

Turbulent water flow is much more efficient at removing heat in a cooling system than water flowing under laminar conditions. Once turbulent flow is achieved, increasing the flow rate does not significantly improve the cooling rate of the system.

In molding applications, many mold operators try to maximize the flow of water through their cooling systems to ensure turbulent flow. Doing so increases energy costs for pumping more water than necessary through the system. This practice may also limit the amount of cooling water available for cooling additional molds on the same cooling system circuit.

By insuring turbulent flow using FCI (Fluid Characteristic Indication) Technology, less water can be used in the molding process, saving precious resources.

Try our on-line Turbulent Flow Calculator:

Turbulent Flow Reference Charts

Approximate Minimum Flow required for turbulence in drilled water passages based on Reynolds Number of 4000

Passage	Nominal Pipe	Minimum Flow in GPM b			
Diameter	Size	40°F	120°F	200°F	
.44"	1/4"	0.88	0.31	0.18	
.59"	3/8"	1.16	0.42	0.24	
.72"	1/2"	1.41	0.51	0.29	

Passage	Nominal Pipe	Minimum Flow in LPM by Temperature				
Diameter	Size	4°C	49°C	93°C		
11mm	1/4"	3.3	1.2	0.7		
15mm	3/8"	4.4	1.6	0.9		
18mm	1/2"	5.3	1.9	1.0		

Expected Rates of Flow

60°F (15°C) Water through Schedule 40 Pipe

Nominal	Flow Rate				
Pipe Size	Gallons per Minute	Liters per Minute			
1/4"	3	11			
3/8"	6	23			
1/2"	10	38			
3/4"	15	57			
1"	25	95			
1-1/4"	45	171			
1-1/2"	60	228			
2"	100	380			
3"	230	870			

Sizing Up Manifolds

The best manifold design provides as much water flowing through all ports as flowing through the end.

of Ports x Flow Rate ≤ Flow Rate of the Manifold End

Using the tables on this page, it is possible to choose a well-balanced manifold. If you are pushing 4 gallons per minute through your ports, you will need 3/8" minimum port size. If you have 6 cooling circuits to feed, you need 24 gallons per minute (6 ports x 4 GPM) flowing into your manifold from a 1" connection on the end.

However, if you are optimizing water using flow regulators to balance each circuit while providing Turbulent Flow, you can supply more ports with a 1" manifold. Thereby saving cooling capacity for other presses down the line. We recommend a 2x safety factor when figuring Turbulent Flow Rate.

Burger & Brown Engineering recommends that flow regulators are installed on the return side of a cooling water loop for best performance.

SMARTFLOW [®] Aluminum Manifolds

General Description

Smartflow® aluminum manifolds are constructed from unique extruded material, precision machined, then anodized for corrosion protection. Many manifold sizes are stocked, however custom manifolds can be made to your specifications.

Standard red and blue colors denote supply and return for cooling water lines. ¾", 1", and 1½" manifolds are equipped with dovetail locking channels, pre–drilled mounting holes, and bolts for ease in pairing and installation. Each manifold with NPT threads includes one bronze end plug.

Features and Benefits

- One-Piece Extruded Aluminum Construction is lightweight with long-lasting durability.
- Quality Anodizing protects the manifolds from corrosion and signifies manifold function.
- Different Port Size Options provide connection flexibility.
- Bronze End Plug is included for customer convenience (NPT only).
- Pre-Drilled Mounting Holes make the manifolds ready to install
- 3/4 thru 1-1/2 manifolds dovetail together for ease in mounting.
- Common Manifold Configurations Stocked to provide quick delivery.

Specifications

Material	Aluminum (6000 Series)
Max. Pressure	150 psi (10 bar)
Max. Temperature	300°F (149°C)
Anodizing	Mil Spec Type II Class 2
Standard Colors	Red, Blue
Optional Colors	Black, Green, Gold, Clear

Assembly

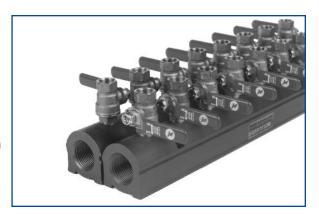

Smartflow® aluminum manifolds are the platform for control of cooling water lines in most types of industrial process cooling. Injection molding is one example and our particular area of expertise. Flowmeters, Flow Regulators, Ball Valves, Quick Disconnect Fittings and more can be added to the manifolds to improve functionality and process control. See page 12 for ordering information.

Custom Manifolds

Special port sizes and locations are possible with Smartflow aluminum manifolds. All fabrication is done from extruded material at our factory in Kansas City. Contact your distributor for price and delivery on custom manifolds.

SMARTFLOW

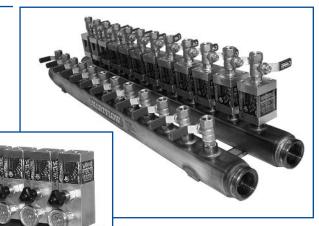

Aluminum and Stainless Steel Manifold Assemblies

Assembly Specification

The Smartflow® manifold line is the platform to control and direct cooling water in many types of industrial process cooling. Flowmeters, Flow Regulators, Ball Valves, Quick Disconnect Fittings and more can be added to manifolds to improve functionality and process control. Individual cooling lines can be accurately controlled according to the demands of each circuit.

Parallel Stainless Steel Manifold Assemblies are built with flowmeters on one half of the manifold pair only. Contact the factory if alternate configuration is needed

Burger & Brown Engineering recommends placing flowmeters and regulators on the return side of the cooling loop for best performance.
